

### **Re: Designer SE Update Nov 07**

The new Designer SE program, version 12124, is installed on your machine. It contains the following improvements.

- Option to cut and pull down jump stitches at embroidery \*\*
- Increased speed (~20%)
- Go to certain stitch number. You can now type in block
- Show thread colour name in Quick help
- Show remaining time for a colour block. The estimated number of stitches remaining is counting down.

### **12382 for your Husqvarna Viking Designer SE. Dec 07**

This new update addresses your questions on the Sensor Q Foot for free motion and embroidery (and the optional Open Toe Free Motion Spring Foot for free motion quilting and artistry). Now simply go to the SET menu and select the Sensor Q Foot setting.

Also, this new version has updates to better handle color changes during embroidery and using the STOP feature with needle down when decorative stitching.

\*\* This needs a hardware upgrade. Please leave unchecked in configure if updating to 12124 or higher until the hardware upgrade is done.
